

Voltage dips and harmonics are two major issues affecting power quality. To share the knowledge, Hongkong Electric has established a Power Quality Centre which enables participants to understand more about power quality and the ways to safeguard the power supplies for their important services.

The Power Quality Centre is equipped with a voltage dip generator and different mock-up installations to demonstrate the effects of power quality on sensitive equipment, as well as the voltage dip ride-through solutions for various types of equipment.

The “Smart Power Centre” provides advice on the choice of electrical equipment or appliances as well as general knowledge on the safe and smart use of electricity. The centre mainly focuses on introducing the effectiveness and easy use of electrical appliances, intelligent panel and automatic lighting control.
